

Air-tight foil packaging.
Perfectly designed for your
budget and the environment.

Hovus 3-Layer and 4-Layer Foil Flat Films

hovus
...inventive packaging solutions

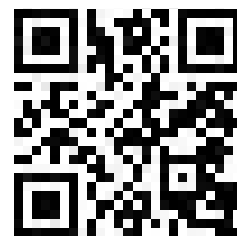

If you're still using cartridges or buckets to package your sealants and adhesives, we'd like to introduce you to a better way...

Hovus 3-Layer and 4-Layer Foil Flat Films both offer economic and environmental advantages over cartridges, and with less work or mess for your customers utilizing buckets.

Our Foil Flat Films arrive at your facility in roll stock form. They're specially designed to run without costly lubricating oil on either horizontal or vertical form-fill-&-seal machinery and will create ready-to-use foil packs that perform in all standard sausage applicator guns. Hovus' durable air-tight foil packaging extends your finished product's shelf life better than the competition.

Unlike bulky cartridges or buckets, our foil flat films reduce to a small flat disc once the product inside has been depleted. This results in significantly less waste-disposal volume, making Hovus Foil Flat Films the more environmentally friendly choice. And, since one roll of Hovus Foil Flat Film equates to two-to-three pallets of empty cartridges, you'll save on transportation and storage costs as well.
